

ENVIRONMENTAL SETUP

Date	16 Oct 2022
Team ID	PNT2022TMID54150
Project Name	CUSTOMER CARE REGISTRY

FLASK SETUP:

The image shows the PyCharm IDE interface. The top pane displays the code for `main.py` in a project named `HelloWorld`. The code is a simple Flask application that returns "Hello World" at the root URL. The bottom pane shows the output of the `Run` action, indicating that the application is running on `http://127.0.0.1:5000`. The output includes a warning about using a development server and two log entries showing successful GET requests for the root URL and the favicon.

```
1 # Importing flask module in the project is mandatory
2 from flask import Flask
3 app = Flask(__name__)
4 # The route() function of the Flask class is a decorator,
5 @app.route('/')
6 # '/' URL is bound with hello_world() function.
7 def hello_world():
8     return 'Hello World'
9 # main driver function
10 if __name__ == '__main__':
11     # run() method of Flask class runs the application
12     # on the local development server.
13     app.run()
```

Run: main x

C:\Users\ariha\PycharmProjects\HelloWorld\venv\Scripts\python.exe C:\Users\ariha\PycharmProjects\HelloWorld/main.py

- * Serving Flask app 'main'
- * Debug mode: off

WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.

* Running on <http://127.0.0.1:5000>

Press CTRL+C to quit

127.0.0.1 - - [16/Oct/2022 09:13:26] "GET / HTTP/1.1" 200 -

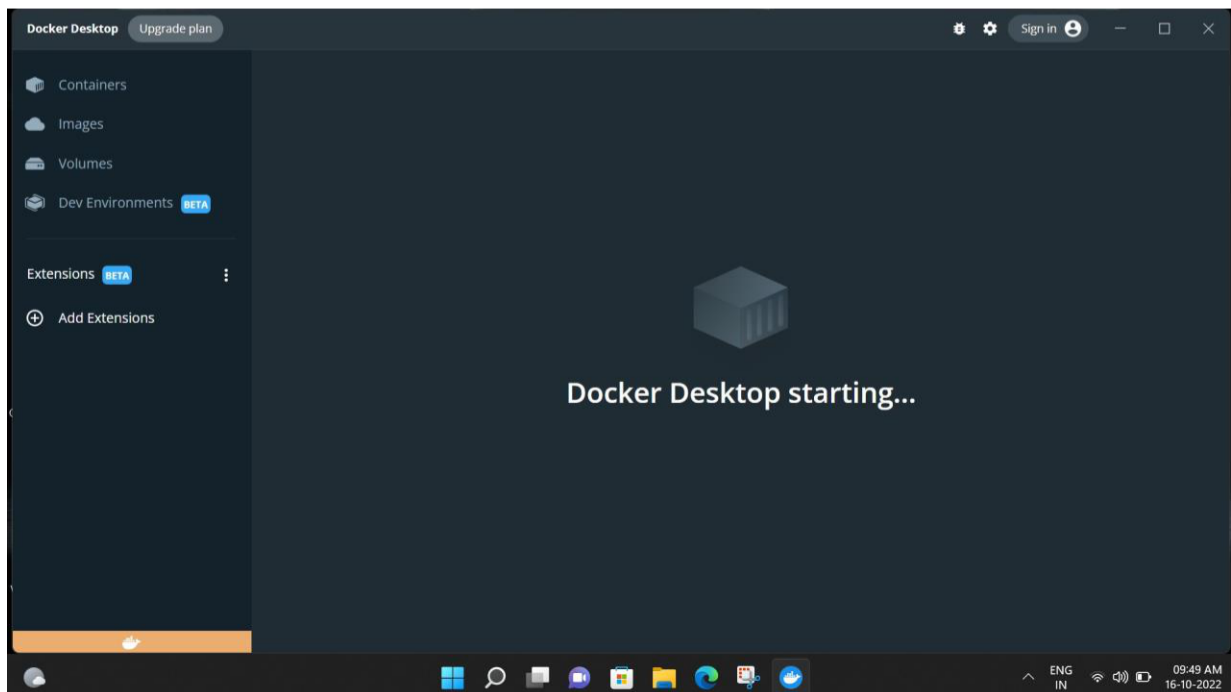

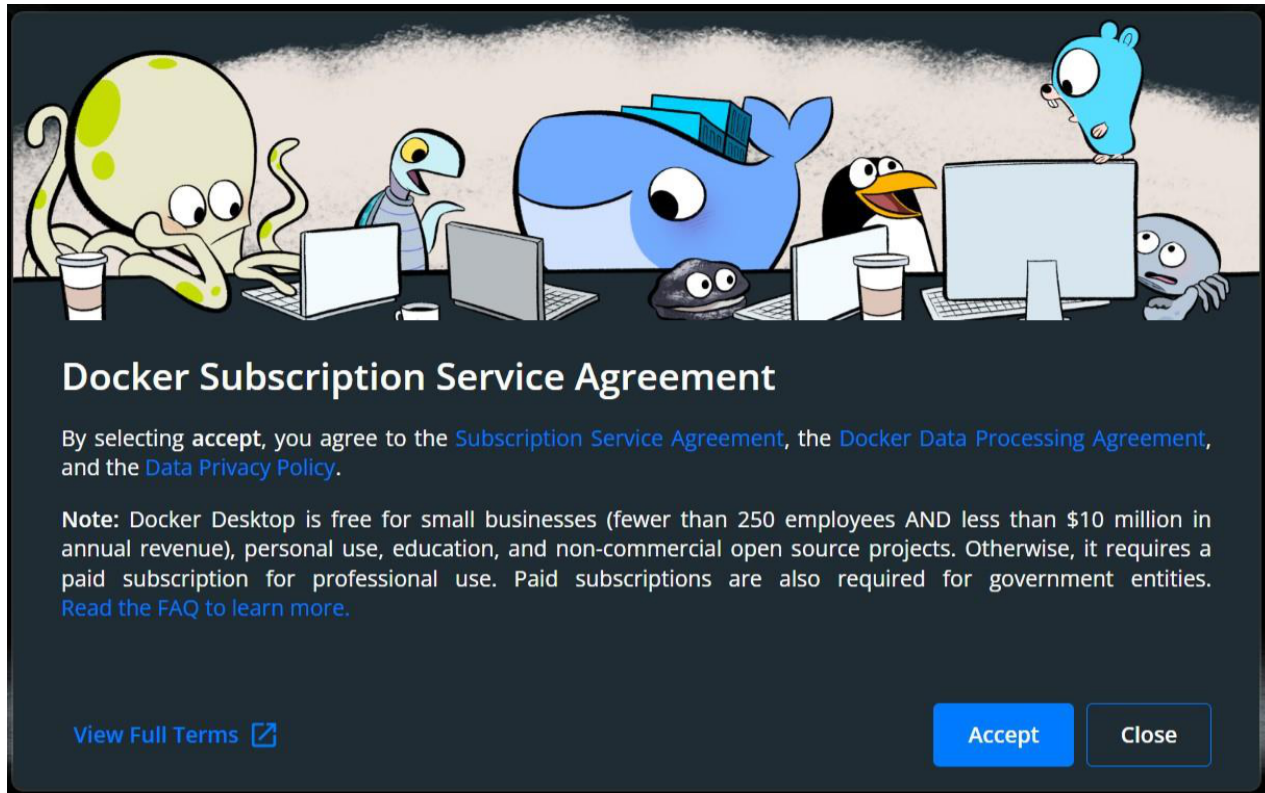

127.0.0.1 - - [16/Oct/2022 09:13:26] "GET /favicon.ico HTTP/1.1" 404 -

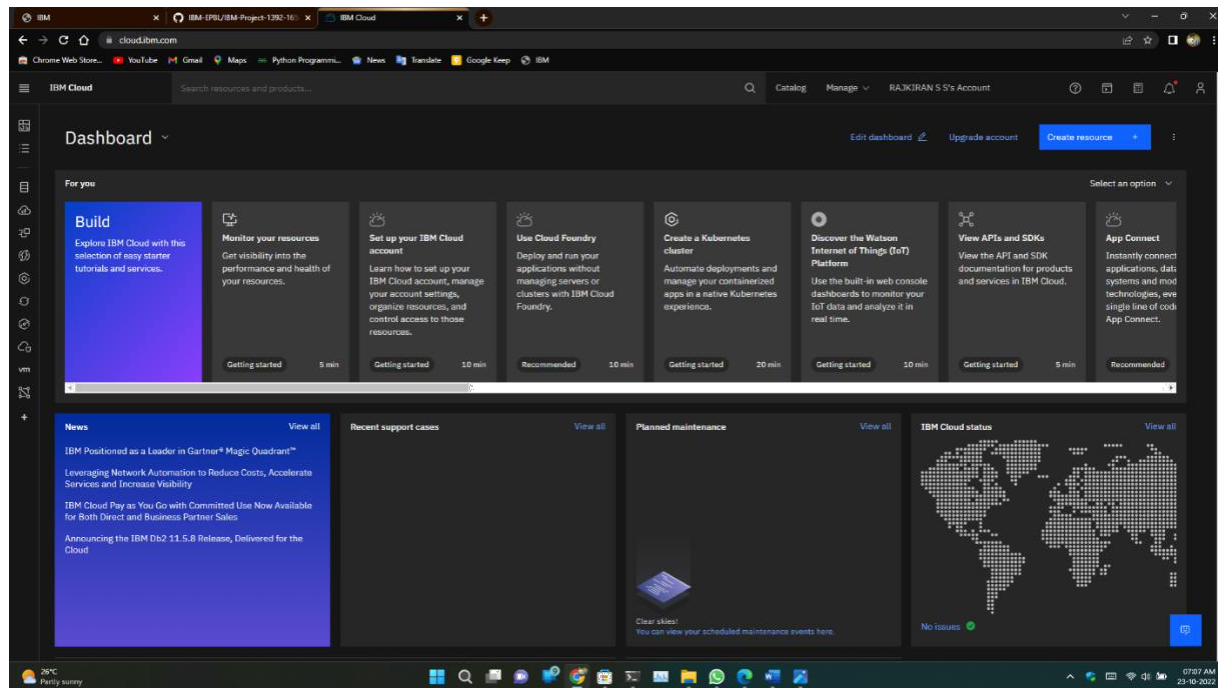

Hello World
